Wu, W.-J., 223

Yoo, J. Y., 145
Yuen, W. W., 75

Zeng, X., 467, 481

SUBJECT INDEX TO VOLUME 25

Analysis/finite-element combined methodology, temperature distribution, 449

BEM for conduction-convection problems, 415
Binary phase change, methodology, 467
Binary phase change, simulation, 481
Block-correction-based multigrid method, 375
Block interphase treatment, 44

Controlled variation theme, applications, 273
Controlled variation theme, theory and formulation, 245
Conventional zonal method, 77

Dielectric field solidification, 357
Differential coservation equations, 4

Finite-element modeling of radiation, 61
Finite-element models of phase-change problems, 119
Finite-volume calculation methods, comparison of, 205
Flow computation using multiblock grids, 39

Generalized zonal method, 79
Grid arrangements on nonorthogonal grids, 193

Hyperbolic conduction problems, solution of, 287

Interfacial momentum transfer, 24
Interphase heat and mass transfer, 25

Laminar flow in a driven cavity, 275
Laminar flow over a backward-facing step, 279

Mixed transform approach in forced convection, 433
Monte Carlo procedure, sensitivity study, 223
Multidimensional finite-element code, 395
Multiphase flow modeling, 1

Navier-Stokes equation, upwind scheme, 145

One-zone analysis, 85
Outflow boundary conditions in channels, 163

P-1 approximation in cold-walled enclosures, 309

Stability analysis of factorization methods, 99

Transient operation of heat pipes, technique, 331
Transient three-phase flow, applications, 21
Transient three-phase flow, solution theme, 1
Turbulent flow over a backward-facing step, 280

Upwind finite-volume method for convection, 177

Zonal method for radiative transfer, 75
